

Would you
let
someone
smoke in
your
classroom
or office?

Mould can be more dangerous than secondhand smoke – & it's here at SFU

Common Symptoms

- Coughing/Wheezing
- Allergic responses
- Increased headaches
- Rashes/skin irritation

Advanced Symptoms

- Auto-immune disorders
- Increased asthmatic reactions or adult onset of asthma
- Lesions & Cancers

Almost all of the above symptoms have been reported by members of SFU's community after spending time in the Education Building. Despite this, there is no information available online, nor are many people are being informed as to the dangers of the building/possible symptoms to report.

The TSSU has issue with the situation and how it has been handled. We are now directly getting involved – don't hesitate to contact us.

Report Leaks, Mould, Musty Smells, and otherwise unexplained symptoms associated with mould & asbestos.

TSSU: tssu@tssu.ca or 778-782-4735

More info & links here: tssu.ca/mould

Facilities BBY: 778-782-3582

**If you're not OK with someone smoking in your class
you're not OK with mould being there either.**

Exercise your right to refuse unsafe work = switch your classroom. If you suspect air quality issues - it's not just for your health - it's for your students.

**Remember: not everyone has outward symptoms
but everyone can be affected!**
